

Playing a Timeline

Step 1: Go to the timelines tab and press the play icon on a timeline content thumbnail

Go to the **Timelines** tab in GenIE 2. Then click the play button on one of the thumbnails (see image below). This will play all the themes associated with that timeline. The stages panel on the right shows the themes which are queued in the timeline, including which theme is currently playing (see image below). The theme currently playing is indicated by a green ribbon on the left-hand edge.
