

Turn off GenIE 2

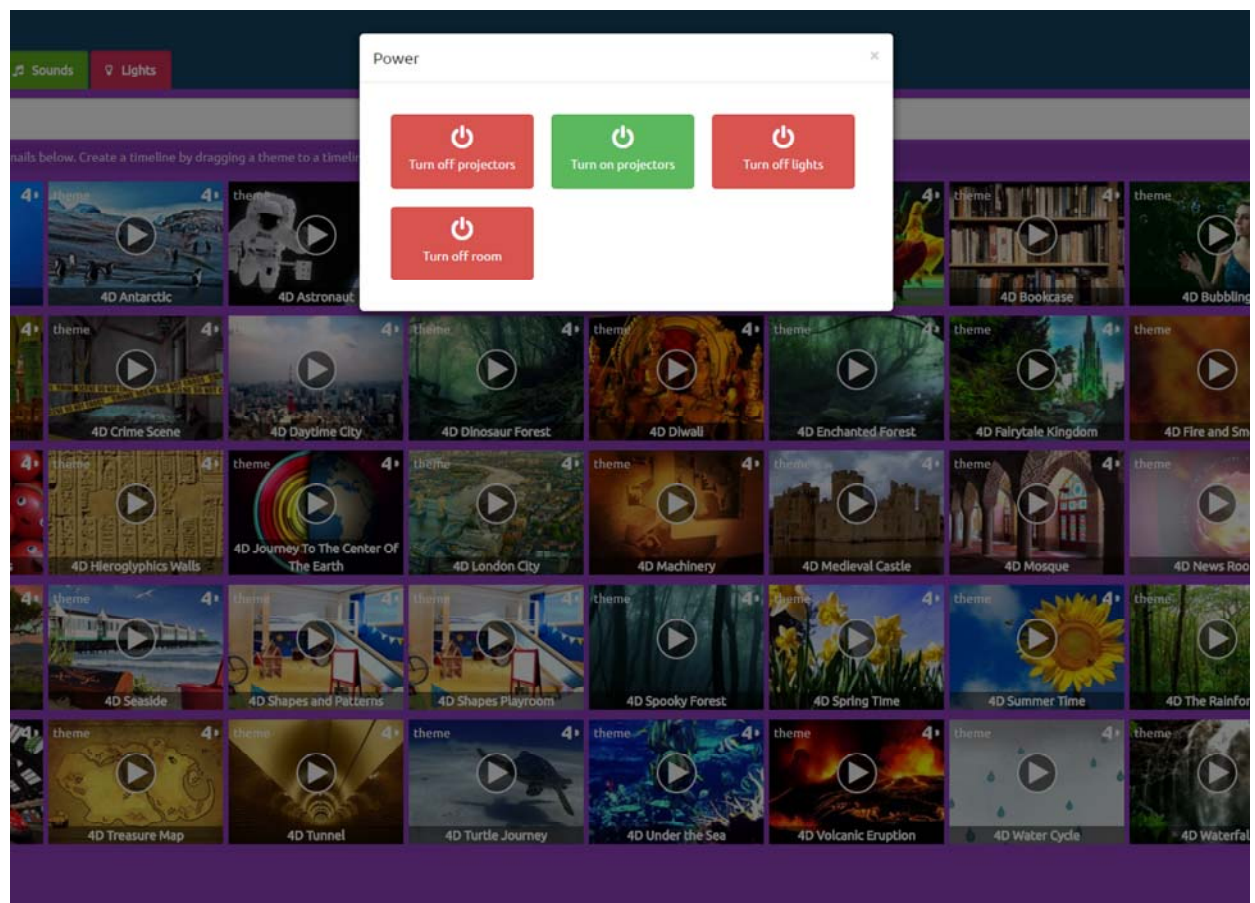

Step 1: Click the power icon on the GenIE 2 room controller

Switch off the lights, projectors, and speakers manually, or you can do so by using the GenIE 2 room controller application. If you are using GenIE 2, press the power icon on global controls on the left hand side (see below).

Step 2: Select the devices you want to turn off

This will bring up power options (shown below). If you want to switch everything off, press **Turn off room**. Then press **Turn off machine & devices**. This will turn off the lights and projectors, and also turn off your PC where GenIE 2 is installed.

TIP: Always check that all devices are switched off and unplugged if necessary
